DETAILED ACTION

Allowable Subject Matter

The indicated allowability of the claims is withdrawn.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

"the master control unit calculates the amount of energy expended based upon the received first and second signals." – there is no antecedent basis for the signals being received.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 4, 15-17, 35 are rejected under 35 U.S.C. 102(b) as being anticipated by Clem.

Clem discloses at least one treadle having at least one tread fig.2; a master control unit 28; a first sensor, in communication with the master control unit, which

Application/Control Number: 10/789,579

Page 3

Art Unit: 3764

generates a first signal indicative of an effective tread speed for the apparatus 78; a resistive element operably coupled with the at least one treadle, the resistive element including at least one resistance level "In accordance with one aspect of the invention, the <u>resistance</u> levels of the <u>resistance</u> mechanisms 13, 15 of the fitness device 32 can be varied with respect to one another according to the heart rate of the user."; a second sensor (80) in communication with the master control unit wherein the at least one treadle has at least a movement; and wherein the second sensor generates at least one second signal with each movement of a treadle", at a second sensor 80 in communication with the master control unit wherein the at least one treadle has at least a movement; and wherein the second sensor generates at least one second signal with each movement of a treadle (the incline sensor will inherently generate a signal with each movement of the treadle), at least one of the desired effective tread speed and the desired resistance level are specified via a user interface col. 3, lines 66 – et seq.

As for claims 15 and 17, it is inherent that Clem's apparatus "may be" configured such that striding, stepping or combined striding and stepping motions are facilitated, based on the speed of the apparatus. It is further inherent that the master control unit determines whether striding, stepping and/or combined striding and stepping motions are to be facilitated by the apparatus based upon at least one of a desired effective tread speed and a desired resistance level col. 6, lines 56 – et seq.

As for claim 35, Clem's incline motor 36, would provide a downward movement (as broadly claimed) and the incline sensor would provide a signal with each downward movement.

Allowable Subject Matter

Claim 6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Claims 19-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to /Glenn Richman/ whose telephone number is 571-272-4981. The examiner can normally be reached on Mon-Thurs.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, LoAn Thanh can be reached on (571)272-4966. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
